

# TRUCOLOR 210 Redbrown

Redbrown ink for the digital printing technology

## Chemical basis

Polymers and pigments in solvents

## Characteristics

Solubility	water-insoluble
Density (20 °C)	approx. 1.39 g/cm <sup>3</sup>
Viscosity (25 °C)	approx. 30 mPas
Viscosity (45 °C)	approx. 15 mPas
Solids content	approx. 46 %

## Shelf-life / Packaging

8 months from date of filling | Containers of 5 kg

## Application

TRUCOLOR 210 Redbrown is a red-brown ink for tile decoration with digital printing technology, which is used with different firing cycles. Its stable colour and optical density allow the user to increase the colour spectrum and intensity.

TRUCOLOR inks can be used for a wide printing temperature range according to the technical requirements of the printing facilities.

## Storage advice

TRUCOLOR 210 Redbrown is not sensitive to frost. In general, we recommend that the inks are stored at least 1 day at production temperatures before usage, especially when the ink has been stored below 0 °C. Frozen inks should be checked after 1 day if they are completely defrosted and have reached room temperature.
