

# TRUCOLOR EF 245

Transparent effect printing frit for digital printing technology

## Chemical basis

Preparation of polymers and pigments in solvents

## Characteristics

Solubility	water-insoluble
Density (20 °C)	approx. 1.290 g/cm <sup>3</sup>
Viscosity (25 °C)	approx. 25 mPas
Viscosity (45 °C)	approx. 13 mPas
Solids content	approx. 43 %

## Shelf-life / Packaging

3 months from date of filling | Containers of 6.25 kg

## Application

TRUCOLOR EF 245 is a transparent effect printing frit for tile decoration with digital printing technology.

On account of the reactivity of the printing frit, a distinct in-glaze behaviour is possible, depending on the base glaze system used. TRUCOLOR EF 245 allows the user to obtain further effects to the applied designs in addition to the bright colour spectrum of the standard TRUCOLOR printing colours.

TRUCOLOR inks can be used for a wide printing temperature range according to the technical requirements of the production equipment.
