

TRUCOLOR EF 398 LUSTER

Luster ink for the digital printing technology

Chemical basis

Preparation of polymers and fine ground glass frit in solvents

Characteristics

Solubility	water-insoluble
Density (20 °C)	approx. 1.30 g/cm ³
Viscosity (25 °C)	approx. 30 mPas
Viscosity (45 °C)	approx. 17 mPas

Shelf-life / Packaging

8 months from date of filling | Containers of 5 kg

Application

TRUCOLOR EF 398 LUSTER is a luster effect printing ink for tile decoration by digital printing technology.

The development of the luster effect depends on the application thickness of TRUCOLOR EF 398 LUSTER. In addition to the broad colour spectrum when applying standard TRUCOLOR inks, TRUCOLOR EF 398 LUSTER allows the user to obtain additional effects relating to the design used.

It is recommended to use printheads that allow a higher application thickness, such as for example XAAR GS 40 or DIMATIX STARFIRE SG 1024 L.

Compatibility of TRUCOLOR EF 398 LUSTER with the used glaze systems and the firing process must be tested in advance.
